

Food Contact Statement

Reel Papers is the distributor of the suppliers hot melt adhesives and water - based adhesives for the EU market

The suppliers hot melt adhesives and water - based adhesives have been comprehensively assessed by Intertek. The purpose of this assessment is to ensure the food contact safety of our products within the EU. Currently, there is no unified adhesive regulation across the EU. To guarantee that our hot melt adhesives and water - based adhesives comply with the European Framework Regulation 1935/2004/EC, we have referred to relevant aspects and restrictions in Regulation (EU) No 10/2011, as well as relevant national legislation, such as certain provisions similar to Swiss Ordinance Annexes 2 and/or 10 or FDA 21 CFR 175.105 and/or 175.125. Based on the results of rigorous testing and assessment, our hot melt adhesives and water - based adhesives are suitable for contact with a wide range of food types, including dry, moist, acidic, alcoholic, and non - fatty foodstuffs. Under specific conditions and constructions, they may also be suitable for contact with fatty foodstuffs, subject to relevant reduction factors and surface - to - volume ratios as stipulated in EU regulations. It should be noted that for manufacturers and converters who use our hot melt adhesives and water - based adhesives in the production of final food contact materials or articles and place the finished products on the market, it is their responsibility to further verify that the final products comply with Regulation (EC) No 1935/2004, especially the requirements of Article 3. For more detailed information about the specific use conditions of our products, which are based on the specific test conditions, please contact our technical sales specialists. They will be able to provide you with our detailed food contact statement upon request.
